POST

TO: All Principals; Employee Organizations; PTA/PTO; Workers; Legal Guardians and Occupant of Buildings Owned by the McDowell County Board of Education

FROM: Will Chapman, Director of Facilities

SUBJECT: NOTIFICATION OF ASBESTOS CONTAINING BUILDING MANAGEMENT PLANS

DATE: October 17, 2017

This annual notice is mandated by the Environmental Protection Agency's final rule regarding asbestos containing materials in schools.

All buildings owned by the McDowell County Board of Education have been inspected by EPA accredited inspectors and a management plan for any asbestos containing building materials (ACBM) has been developed by accredited EPA management planners and on file in the principal's office at individual school sites. You may also review a copy at the McDowell County Board of Education in Welch. The plan is available for public inspection at either site upon request.

Each plan contains the necessary EPA regulated response action consistent with the assessment of the ACBM. All response actions will be carried out by EPA accredited personnel in compliance with EPA regulations.

Periodic surveillance of all ACBM every six months and a complete reinspection every three years will be conducted as long as any ACBM remains in the building.

All principals are instructed to provide a copy of this notice to each student at their designated school site. After you have complied with this request, please send written documentation to the Facilities Department when this mandate has been completed.

Where we unleash the potential of every student every day!
